Search Notes

Daniel,

Due to seq. length, unable to search amino acid query. I did, however, search Seq. ID 1 in the AA dBs.

Beverly

Note: Qy his and 1 Seg 00 99.8% - 100% match

Subject:

Search Request 09914191

Please search for the following in the commercial and issued patent databases:

-a nucleic acid comprising SEQ ID NO:1

Also, I have reason to believe that the reverse complement of SEQ ID NO:1 encodes all or a portion of the following amino acid sequence:

MTHVASQFASSYVFYWRDYFEDQPLLYPPGFDGRVVVYPSNQTLKDYLSWRQADCHINNLYNTVFW ALIQQSGLTPVQAQGRLQGTLAADKNEILFSEFNINYNNELPMYRKGTVLIWOKVDEVMTKEIKLPTE MEGKKMAVTRTRTKPVPLHCDIIGDAFWKEHPEILDEDS

would it be possible to search this amino acid sequence against the commercial and issued patent databases as well?

Thanks, Dan

Daniel M. Sullivan Examiner AU 1636 Room: 12D12 Mail Box: 11E12 Tel: 703-305-4448

Search Topic:

Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevent citations, authors, keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevent claim(s).

```
The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypucleotide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's Parkinson's disease, Huntington's diseases, anchortopic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and
assays for receptor activity, arthritis and inflammation, leuraemias where C.N.S disorders.

                                                                                                   a
                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602

(ull-length cDNAs defined in the specification. Where a primer set

comparises: (a) an oligo-dT primer and an oligonucleotide complementary

to the complementary strand of a polynucleotide which comprises one of

congonucleotide comprises at least 15 nucleotides; or (b) a combination

oligonucleotide comprises a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

polynucleotide which comprises a 1'-end sequence, where the

oligonucleotide which comprises at least 15 nucleotides and the combination of

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

connection and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

cDNAs easily without any specialised methods. AAH0316c to AAH13628 and

AAH13613 to AAH13621 to AAH13632

represent oligonucleotides, all of which are used in the exemplification

of the complementary in the primers and and and and and an antisonal and and an antisonal and an antisonal and antisonal and antisonal and an antisonal and an antisonal and an antisonal and an antisonal and antisonal and an antisonal and antisona
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set
compirates: (a) an oligo-dT primer and an oligouncleotide compises one of
the complementary strand of a polymucleotide which comprises one of
the 5602 mucleotide sequences defined in the specification, where the
cligonucleotide comprises at least 15 mucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polymucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to the
complementary strand of a polymucleotide which comprises a 5'-end
sequence and an oligonucleotide comprises a 3'-end sequence complementary to a
polymucleotide which comprises a 1'-end sequence of in
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polymucleotides,
particularly full-length cDNAs. The primers are also useful for the
cetection and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the
cDNAs easily without any specialised methods. AAH13628 and
AAH13613 to AAH13621 co AAH13629 to AAH13632
represent thuman amino acid sequences; and AAH13629 to AAH13632
represent constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              479

The colon cancer antigens. The colon cancer antigens are collectively and cancer antigens. The colon cancer antigens are collectively and cancer antigens. The colon cancer antigens and vector of diseases associated with inappropriate P catagnosis and treatment of diseases associated with inappropriate P cargonistion. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing to express the proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and ABB7789 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    362

the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Auntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and threapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                          216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CTGCCAACAGAAATGGAAGGAAAAAAATGGCAGTGACCCGGACCAGGACAAAGCCAGTG 356
                                                                                            The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
 capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ValGlySerLeuSerProProProProAlaSerPro-SerGlyGlyArgSerProSerTh 206
                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an B-value sequences are actor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CCTTCCTTCCCTGTTCCCCTCCCAACTTGAGTTGTCTCATTCGCACCAGTGTCCTGGGTG 193

The differentiation enhancing factors (DEF), comprise at least one each of SH3 consensus binding sequence, ankytin repeat, pleckstrin homology domain and C2 domain. The DEF induce adipogenesis or neurogenesis; they are mediators of SH3-domain dependent signalling and may be involved in cellular gene expression, cytoskeletal architecture, protein trafficking, endocytosis or adhesion, migration, proliferation and differentiation of calls. Typical applications of DEF and agents that modulate interaction between the protein and it's ligand, or of nucleic acid expressing them, are treatment of hyperplastic and neoplastic disease (a wide range of solid tumours and leukaemias), including metastases; for in vitro induction of differentiation of neural creat calls to neurons, glial cells etc.; for increasing neuron survival, and inducing cell creat, in the nervous system (e.g. treatment of traumatic injury, stroke, Alzheimer's, Parkinson's or Huntington's diseases, amylotrophic lateral sclerosis, multiple sclerosis etc.).

Patent No. 5869330

GENERAL INFORMATION:
APPLICANT: Scherer, Philipp E.
APPLICANT: Lodish, Harvey F.
TITLE OF INVENTION: A NOVEL SERUM PROTEIN PRODUCED
TITLE OF INVENTION: EXCLUSIVELY IN ADIPOCYTES
NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:
ADDRESSEB: Hamilton, Brook, Smith & Reynolds, P.C.
                                                                                                                                                                                                                                                               375

Sequence 1, Application US/09844281

Patent No. US2002082386A1

GENERAL INFORMATION:

APPLICANT: Mangold, Beverly L.

APPLICANT: Aldrich, Jennifer L.

APPLICANT: O'Brien, Thomas

TITLE OF INVENTION: Anthrax Specific Antibodies

FILE REFERENCE: 38602.0003

CURRENT APPLICATION NUMBER: US/09/844,281

CURRENT PILING DATE: 2001-04-30

FRIOR FILING DATE: 2000-04-28

NUMBER OF SEQ ID NOS: 3

SOFTWARE PATENTING DATE: 2000-04-28

NUMBER OF SEQ ID NOS: 3

SOFTWARE: PatentIn version 3.1

FUNCTION: IN THE NERVOUS SYSTEM, COULD HYDROLYZE ATP AND OTHER NUCLEOTIDES TO REGULATE PURINERGIC NEUROTRANSMISSION. HYDROLYZES ADP ONLY TO A MARGINAL EXTENT (BY SIMILARITY).

CATALYTIC ACTIVITY: ATP + H(2)0 = ADP + phosphate.

COFACTOR: REQUIRES CALCIUM AND MARGHESIUM.

SUBGELLULAR LOCATION: Integral membrane protein (Potential).

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sasaki H., Sato K., Schoenbach C., Seya T., Shibata Y., Storch K.-F

SUBCELLULAR LOCATION: Nuclear.
TISSUE SPECIFICITY: UBIQUITOUS.
PTH: PHOSPHORYLATED BY AKTI.
DISBASE: INVOLVED IN A T(6;11) (Q21;Q23) CHROMOSOMAL TRANSLOCATION
IN SECONDARY ACUTE LEUKEMIA THAT INVOLVES FOXO3A AND MLL.
SIMILARITY: CONTAINS 1 FORK-HEAD DOMAIN.
DATABASE: NAME-ARIBS Genet. Cytogenet. Oncol. Haematol.;
WWW*"http://www.infobiogen.fr/services/chromcancer/Genes/AF6q211D125.html".
